
WEST VIRGINIA UNIVERSITY SCHOOL OF MEDICINE

Hematopathology Fellowship

Description: This one year Hematopathology Fellowship training program is based on the philosophy of accurate diagnosis through the integration of morphology with advanced state-of-the-art diagnostic studies. Fellows initially receive focused training in these laboratory methods and subsequently focus on globally integrating these methodologies with a patient's morphology and clinical history. The Program's goal is to provide Fellows with clinically-oriented expertise in hematopathology through participation in these laboratories on a daily basis as the cases are initially assessed and ultimately diagnosed. The Program provides advanced training in the interpretation of blood, bone marrow aspirates/biopsies and lymph node biopsies, including the evaluation of enzyme cytochemistry, flow cytometry, immunohistochemistry, cytogenetics and molecular studies. In addition to a strong focus on clinical hematopathology, the Program provides the Fellow with exposure to scholarly clinical research.

Requirements: Applicants must have successfully completed 48 months of combined clinical and anatomic pathology prior to the start of their fellowship year and be eligible to obtain a West Virginia Medical License.

Stipends: Stipend is dependent on the level of prior post-graduate training.

Applications: Applications consist of a personal statement, CV, USMLE Scores, letters of reference, ECFMG certificate for international graduates and other relevant documentation. Applications will be accepted until the one position for a given year is filled. Jeffrey Vos, Director of Hematopathology Fellowship, West Virginia University, Pathology, Robert C. Byrd Health Sciences, Box 9203, Morgantown, WV 26506
