

This year I was able to attend the American College of Veterinary Pathologists conference in Montreal, Canada due to the generous travel award provided by the Intersociety Council for Pathology Information. This experience was especially important because it allowed me to display a poster describing a prospective research study that I am currently involved in with the pathology, oncology, and radiology departments at Purdue University. Furthermore, I had the opportunity to attend numerous lectures, including epigenetics, potential therapeutics for traumatic brain injury, and diagnosing cattle diseases. These lectures not only furthered my knowledge in pathology, but gave me insight into the numerous opportunities and aspects in the field. Overall, the conference was rewarding and stimulating, and I am excited to be a member of this dynamic discipline.
