

Hello everyone, my name is Chunjie Wang, a PGY4 anatomical pathology resident from the Faculty of Medicine, University of Manitoba, Winnipeg, Canada. It is my great pleasure to share my recent experience in 64<sup>th</sup> Annual Meeting of the Canadian Association of Pathologist, which was held in Québec City, Canada, June 8-11, 2013.

With the travel award from The Intersociety Council for Pathology Information (ICPI), Not only had I this unique opportunity to present my work “**A case of pseudoinvasion of lymphovascular spaces in the cervical biopsy, a diagnostic pitfall**” to the attendees, but I attended a variety of workshops and symposia to enrich my knowledge and skills. For example, after I listened to the workshops-“the common challenges of epithelial and mesenchymal lesions of uterus”, “ Difficult diagnoses in cytology: pancreatic FNA, Bile duct brush, and Lung EBUS”, “Practical approach to atypical/malignant cutaneous spindle cell neoplasms”, I believe they will affect the way I practice surgical pathology significantly. Furthermore, the social events of the conference provided me a great opportunity to meet old friends and greet new colleagues.

Québec City is one of the oldest cities in Canada featured itself with French culture and a wide array of Europic architecturs. I tried my best to walk around to experience the unique scene and beauty of this fantastic historic city. Finally, I would like to extend my many thanks to ICPI, your financial support makes my trip possible.
