

Christopher Pinelli ICPI/ASIP Meeting Report

While at the combined ACVP-STP annual meeting, I was able to present my data to a widely-varied audience. I talked to a number of different people regarding my project and was given some interesting ideas to consider in the short term, and long term, timelines of my project. I was also afforded the opportunity to interact with pre-existing and new colleagues in both academia and industry. Lastly, I was able to attend a number of interesting lectures, the most influential of which was given by Dr. David Meyerholz on Principles for Semi-Quantitative Scoring of Tissues. This has given me different perspectives on how to interpret certain data sets that I currently have, or anticipate generating in the future. I believe this meeting has greatly influenced my short-term and long-term success in the field.
