Dear Dr. Sobel & the ICPI Trainee Travel Award Committee,

I feel extremely fortunate to be selected as one of the recipient of 2015 ICPI Trainee Travel Award that helped me to attend American Society of Clinical Pathology 2015 meeting at Long Beach, California.

I am currently pursuing Head and Neck Pathology fellowship at MD Anderson Cancer Center, Houston and did a fellowship in Breast Pathology at UT Southwestern Medical Center, Dallas in 2014-15. The travel grant from ICPI has helped me immensely to be able to present my research work as well as interesting cases I saw during my fellowship at UTSW. The poster presentations in which I was involved entitled "Metastatic estrogen-receptor positive lung adenocarcinoma to liver and breast mimicking recurrent breast carcinoma", "Significantly Reduced E-Cadherin Protein Expression (H-Score) in Triple Negative Breast Cancer and Its Correlation with Ki67", and "Metastatic carcinoid tumor to bilateral breasts mimicking primary low-grade invasive ductal carcinoma: an impact on patient care" and one of the poster was selected in the category of Best Resident Poster Award Competition.

Apart from presenting research work at the meeting, I had an enriching experience from lectures as well as virtual microscopy sessions in the fields of breast and head and neck pathology from eminent leaders in the field. The meeting also provided me a great opportunity for networking at professional as well as personal level.

I would like to again thank ICPI for their generosity in supporting trainees like me to be able to attend these incredible meetings.

Sincerely,

Karan Saluja, M.D., M.B.B.S.
Fellow, Head and Neck Pathology
Department of Pathology and Laboratory Medicine
UT MD Anderson Cancer Center
